

* What corrections did you have to make?

* I added alternative text to all images. When I did this at first, it said my description was insufficient, so I decided to try to describe a little of what each photo looked like for all artist profile pictures and the album cover.

* Do you think your website is usable if you turn off the CSS? Why or why not?

* It is useable, technically, but it would be a very difficult experience for people who can see and are used to primarily navigating a website by sight. For example, all of the text and images are not spread out thoughtfully and the images are far too large, each taking up the whole screen. All of the same buttons are accessible using the tab key without the CSS (to prove this, I temporarily deleted the CSS sheet), so it is technically useable, though, just not with ease.

* Is your site is tabbable? In other words, without the use of the mouse, are all the links and buttons accessible using the tab key?

* Yes, the website is tubbable. I tried this and it tabbed me through all buttons and the artists' profiles. However, it did not tab through some text that is clickable on the real Spotify- for example, on the player, I could not tab through the song name or artists cover, nor could I tab through the button that drags along the song's timeline.
